Mykos WP is the water-soluble powder form of Mykos. Mykos is a NATURAL AND ORGANIC species of soil fungi that creates a “sponge-like” mass which collects and stores nutrients and water, increasing the uptake of both. This single species mycorrhizae contains only Rhizophagus intraradices. Mykos does not contain any other microbes such as trichoderma or ecto mycorrhizae (which have no known direct effect on any vegetables, fruits, flowers or herbs).
